

ALUMNI WEBINAR #14 - CORONA IN BRAZIL

A webinar with Dr Ana Paula Matos Porto

08 jul 2021 13:00 - 14:00

Dit is de omschrijving

Alumni webinar #14: “COVID-19 in Brazil - regional and local perspective on clinical case management in the early phase of the pandemic”

Register in advance via [Zoom](#).

Brazil is among the countries most affected globally during the COVID-19 pandemic. To date, available data on the epidemiological and clinical features of the disease in Brazil are limited. Clinical outcomes of hospitalised patients are known to be seriously affected by COVID-19, both directly and indirectly. In such indirect effects, COVID-19 has been speculated to intersect with another top priority of globally health, namely antimicrobial resistance (AMR).

In this seminar, ITM alumna Dr Ana Paula Matos Porto (AIM, 2018), involved as a researcher in the COVID-19 outbreak in Brazil, will provide one of the few data-driven examples of the implications of COVID-19 for AMR and healthcare-associated infections, presenting data from 21 Brazilian ICUs in the early phase of the pandemic. Additionally, she will present her findings on COVID-19 hospital mortality in a dedicated tertiary hospital in Ceará (Northeastern Brazil). She will particularly focus on how factors associated with clinical outcomes of COVID-19 have evolved over the course of the pandemic.

Sprekers

- **Dr Ana Paula Matos Porto**, Researcher, School of Public Health of Ceará, Fortaleza – Department of Infectious Diseases of Faculty of Medicine, University of São Paulo, Brazil
- **Dr Esther van Kleef**, Senior epidemiologist, Department of Public Health, ITM
